

SEEgnage

A new web application for **digital signage**

and for the deployment of audio-visual content over LAN, intranet, Internet

*With an attractive interface, compatible with most popular browsers, **Seegnage** allows users to create and modify, in a fast and efficient way, informational and commercial multimedia contents, to be displayed on screens for digital signage.*

*The platform works on pc, notebook, workstations, industrial pc, tablet pc, connected by VGA or HDMI to **LCD / TFT high-resolution screens**, and an **IP network infrastructure like intranet / Internet**.*

Some **Seegnage** features:

SEEgnage | open menu | logout

- **User Management**
- **Terminal Management**
- **Layout Management**
- **Upload Contents Tools**
- **Automatic Converter**

With Seegnage Layout Manager's drag and drop, resize and click and drag functionalities, you can create custom layouts to suite your needs.

The user can easily organize one or more areas to include informational messages or promotional images, or activate weather forecast area, insert video clips in any format (they will be automatically converted to FLV format), or upload JPG, GIF, PNG images with fading effects.
